I just checked this code and it has many in called URL's. securidesign for coreldraw x6 serial keyQ: How can I make the last line of a table cell not sticky? I've made a table cell that is trying to style the last line. It's too long for the table cell to be the same width as the other cells. To get around this, I've inserted a white-space:nowrap; in the CSS of the table cell. This works really well, except for one issue. The last line in the cell isn't sticky at the bottom of the table cell. Ideally, I'd like the last line of the table cell to stick to the bottom of the table cell, which would mean I could set the width of the table cell to be the same width as the other cells and have the last line of text stick to the bottom of the table cell. table.space { border-collapse: collapse; width: 100%; font-size: 9pt; } th, td { padding: 2px 4px; border: 1px solid #ccc; border-bottom: 0; font-weight: bold; } th { padding-left: 4px; padding-right: 4px; border-bottom: 2px solid #ccc; text-align: left; } td { padding-left: 2px; padding-right: 2px; border-bottom: 1px solid #ccc; border-top: 1px solid #ccc; text-align: left; } tr { background-color: #f0f0f0; } tr.odd { background-color: #e8e8e8 }
